

Gbélén Forest

Forêt de Gbélén (Test version)

GUITIPA004

Country: **Guinea**

Administrative region: **Dubreka (Prefecture)**

Central co-ordinates: **9.95056 N, -13.52194 E**

Area: **14.5km²**

Qualifying IPA criteria

A(i), C(iii)

IPA assessment rationale

The Gbélén forest is a lowland evergreen forest of high biodiversity value comprising significant populations of threatened species such as *Talbotiella cheekii* EN and *Diospyros felcis* EN, and rare herbs that grow on moist rocks (e.g. *Heterotis pygmaea* (EN) and *Cinnobotrys felcis* (EN)).

Site description

Gallery forest and lowland evergreen forest situated in the north of Dubréka Prefecture. The forest is surrounded by village communities that illegally enter the area for excessive timber cutting. Bush fires and cattle grazing were observed on the plateau. The southern part of the forest suffers from illegal wood cutting by the local

populations of Bawa and Balayah (Khorira Sous Prefecture).

However, most of the forest in the northern and western valleys is intact due to the flow of water and vertical rocks on both sides making access very difficult. Here there is a closed canopy with open understorey throughout.

Gbélén means 'valley' in the local Susu language. This valley belongs to the old village of Bétayah that has now moved to the new village called Bawa, on the Dubréka-Tanènè road because of the easier access. The river Gbélén took its name from the valley it flows through.

Botanical significance

This is one of the most beautiful intact lowland evergreen forests that survives in the valleys of Dubréka Prefecture. Fed by several rivers which support the high biological diversity, notably populations of threatened species such as *Talbotiella cheekii*, *Heterotis pygmaea*, *Diospyros felciana*, and *Cinnobotrys felcis*. Forest trees of large circumference are still present and form a closed canopy over the area.

Habitat and geology

The valley and surrounding area consist of Ordovician quarzitic sandstone and oligomictic conglomerates. This is the same outcrop

that continues towards Pita and the southern extent of the Fouta Djallon. The plateau has grasslands with forested valleys.

Conservation issues

A part of the forest has been illegally exploited by the local population since 2013. The excessive cutting of wood from the forest has resulted in the reduction of the quality and number of threatened species in the forest. The areas of grassland on the sandstone plateau above are subject to the effects of bushfires set for field clearance and growth of pasture for cattle. The forest found in the valleys in the north, east and west on both sides of the Gbélén valley are protected by the steep vertical rock faces.

Site assessor(s)

Assessed by:

Pépé Haba, Guinée Biodiversité

Charlotte Couch, Royal Botanic Gardens Kew

Gbamon Konomou, Herbier National de Guinée

IPA criterion A species

SPECIES	QUALIFYING SUB-CRITERION	≥ 1% OF GLOBAL POPULATION	≥ 5% OF NATIONAL POPULATION	1 OF 5 BEST SITES NATIONALLY	ENTIRE GLOBAL POPULATION	SOCIO-ECONOMICALLY IMPORTANT	ABUNDANCE AT SITE
